

Mahuzon Abdon DENAKPO

Incoming PhD Student in Statistics | Mathematical Statistics & Probability

abdon.denakpo2000@gmail.com | github.com/mahuzondenakpo | linkedin.com/in/mahuzon-abdon-denakpo

RESEARCH PROFILE

Graduate of two Master's programs in Statistics and Probability (IMSP, with honors) and Data Science (University of Angers, with merit; Henri Lebesgue Centre excellence scholarship). Formally admitted to the PhD in Statistics at Université du Québec à Trois-Rivières (expected start: January 2027). Research interests include nonparametric statistics, probability, stochastic processes, and statistical learning.

EDUCATION

2027 (expected) — PhD in Statistics | Université du Québec à Trois-Rivières, Canada

- Admission confirmed; expected start in January 2027.

2024–2025 — Master's in Data Science | University of Angers, France

- Graduated with merit; Henri Lebesgue Centre excellence scholarship. High-dimensional statistics, time series, statistical learning, image processing, reinforcement learning.

2022–2024 — Master's in Statistics and Probability | IMSP, University of Abomey-Calavi, Benin

- Graduated with honors. Stochastic calculus, mathematical statistics, nonparametric statistics, functional analysis, Monte Carlo methods.

2018–2021 — Bachelor's in Mathematics and Computer Science | University of Abomey, Benin

- Analysis, algebra, probability, algorithms, and programming.

RESEARCH EXPERIENCE

Mar.–Sep. 2025 — Data Scientist Research Intern, LPHI, University of Montpellier

- Modeled biological networks using ordinary differential equations; developed a GNN for directed causal inference (F1 score: 0.85); compared with Granger causality, SWING and Lasso. Python and PyTorch Geometric.

Mar.–Sep. 2024 — Master's Thesis, IMSP

- Fractional stochastic differential equations: existence, uniqueness, and Hyers–Ulam stability.

PROJECTS AND PROFESSIONAL EXPERIENCE

Oct. 2024–Mar. 2025 — Financial Volatility Modeling, University of Angers

- Time-series modeling and diagnostics using ARCH/GARCH.

Dec. 2024–Jan. 2025 — Biological Activity Prediction, ENS Challenge

- Compared Random Forest and XGBoost with hyperparameter optimization and five-fold cross-validation.

Jan.–May 2023 — Survey Methodologist, INStAD, Benin

- Data quality checks for more than 100,000 observations; automation with R and SQL.

Aug.–Nov. 2023 — Statistical Analyst, CASEG, Togo

- Macroeconomic forecasting (GDP and inflation) using ARIMA models in R.

TECHNICAL SKILLS

Probability and statistics: stochastic calculus, inference, nonparametric statistics, Monte Carlo, econometrics, ARIMA, ARCH/GARCH.

Machine learning: GNNs, CNNs, Random Forest, XGBoost, SVMs, reinforcement learning.

Programming and tools: Python, R, SQL, PyTorch, Git, LaTeX, Power BI, Excel, Hadoop, Spark.

Languages: French (native), English (B1, improving).
